

# Atlantis

**Atlantis is an italian brand specialized  
in designing and manufacturing  
high-quality sustainable headwear  
since 1995**

# Our responsibility

We are serious about our sustainable mission and want to prove that we are transparent and trustworthy through partners who promote the highest standards in the industry.

We want our hats to be on people's heads for as long as possible since high-quality headwear has a longer life cycle.

Through collaborations with international standards and associations, we want to give consumers the certainty that the products they buy have been accredited by a third party.

This means that our products are made responsibly and that we work with all partners in our supply chain to adhere to strict environmental and social standards.

# ReTraze

ReTraze collaborates with small businesses, fishermen, and NGOs to collect discarded fishing nets and transform them into 100% recycled PE. Since 2016, ReTraze has been actively involved in collecting these abandoned fishing nets.

Through years of meticulous research and continuous improvements, they have established a vertical supply chain that effectively converts discarded fishing nets

into 100% recycled PE ReTraze fishing net panels. The recycling process employed by ReTraze involves physical methods, including sorting, cutting, washing, melting, chipping, extrusion, and precision cutting. Through their efforts, they not only reduce waste, but also create a product that stands testament to the potential of responsible recycling.

# Technologies

The revolution doesn't stop.  
Thanks to our continuous R&D  
we do our best to make the traditional  
treatments more human and eco-friendly,  
maintaining the high quality  
and performance of our fabrics.

## ReTraze Aqua-®

is a branded solution dyed recycled polyester yarn made by Recycutex. Unlike traditional wet processes where yarns are produced and then dyed, with dope dyeing the pigments are trapped inside the recycled plastic after it cools to a solid form, becoming part of the new, stronger yarn and saving more energy, water and emissions during the process.

The Re-Traze Aqua-® source of plastic bottles is collected entirely within 20km from the seashore, and they continue to work on expanding the collection area and tracking system.

In contact with the skin, the Dry-tech 100% recycled polyester band is completely breathable, absorbs sweat and allows for quick drying.

# Dope dyeing

Our aim was to find a way to reduce water in the colouring process. The conventional dyeing process uses hot water and chemicals to make the colour adhere to the synthetic fiber, consuming water, energy and emitting CO<sub>2</sub>.

Dope dyeing instead diverts from traditional wet processing because of its reduced environmental impact. Typical of recycled polyester, it involves adding colour pigment “upstream”, directly to the melted plastic solution before the fiber is made. Unlike traditional processes where yarns are produced and then dyed, with dope dyeing the pigments are trapped inside the recycled plastic after it cools to a solid form,

becoming part of the new, stronger yarn. With this approach, dyeing can be done by hot transfer without immersion in water.

We partner with ReTraze Aqua-® solution-dyed recycled polyester yarn which saves energy, water and emissions during the process.

Their source of plastic bottles is collected entirely within 20km from the seashore, and they continue to work on expanding the collection area and tracking system. We continuously try to improve water savings and look for new and more efficient dyeing technologies, which we’re striving to adopt as they become available.

# Skye

- **Main Fabric:** 100% recycled honeycomb polyester

Structured 6-panel cap made of dope dyed polyester, a certified recycled fabric dyed by hot transfer without immersion in water. Full prostitching, mid visor and 6 eyelets. High quality Hook & Loop closure.

# Recycled Polyester

Polyester is an important fiber in our collections and one of the most widely used in the world: strong, durable and crease-resistant, it allows us to make lightweight headwear that dries quickly.

But its production comes at an environmental cost: it's a synthetic fiber derived from oil with a lower environmental impact than the production of natural fibers in terms of water and land<sup>1</sup> but, the energy required to produce polyester makes it a very high-impact process<sup>2</sup>.

This is why Atlantis wants to encourage the use of recycled polyester instead of virgin fossil-based one.

Its alter-ego, recycled polyester, or rPET, is made from polymers obtained by melting

used plastic bottles and transforming them into textile fiber.

Did you know that every minute, nearly 1 million plastic bottles are purchased around the world?<sup>3</sup>

Even if recycled options allow a reduction of emissions compared to the virgin options, we know that it's not the definitive solution to pollution from synthetic fibers: rPET's mechanical recycling process significantly reduces the material's quality and unfortunately very few clothes are recycled back into textile use and the majority of wasted polyester garments are still in the landfills. Moreover, rPET is not biodegradable and loses microplastic fibers as much as virgin plastic.

# Recycled cotton

Producing a cotton fabric requires a large amount of water. About 10,000 litres of water are needed to produce 1kg of cotton, more or less the equivalent of one T-shirt or a pair of jeans.

If we choose the alternative by using recycled cotton, we extend the life span of a fiber that has already been created using fewer environmental resources.

Recycled cotton is regenerated cotton fiber obtained from production waste, like the one in our collection (pre-consumer) where our supply chain partners collect textile scraps from fabric production, or fabrics that have reached the end of their life (post-consumer). The pieces of fabric, once collected and divided by colour, are chopped and transformed back into raw fiber. The result is then spun back into yarns for reuse in other products.

With regenerated cotton the same fabric can find new life in other products using less energy, water, chemicals and freeing up the land for other crops compared to virgin cotton, as well as preventing the product from ending up in landfills.

We are constantly working with our supply-chain partners to use more recycled cotton in our raw materials whenever possible.

# Recy Three

- **Main Fabric:** 50% recycled cotton - 50% cotton
- **Side&back:** 100% recycled polyester

The Recy Three weaves three different materials, adding a stylish recycled polyester mesh and closure in R-PET.

# Organic cotton

Cotton is the world's largest non-food crop. Grown by more than 80 countries, its production is concentrated in India, China, US, Brazil, and Pakistan which combined together produce 75% of all the world's cotton.<sup>1</sup>

Cotton is an impressive material and one of the most used in our collections: it's soft, comfortable, breathable and hypoallergenic. Despite its presence in nature, conventional cultivation is often not so sustainable, which uses chemicals (synthetic pesticides, herbicides, fertilisers and GMOs) and large amounts of water for irrigation, irreversibly damaging the soil. There are also social impacts, such as child and forced labour and exposure to potentially toxic and carcinogenic compounds.

The alternative exists and is called organic cotton grown without the use of pesticides and chemical fertilisers which, in the long run, filter both into plants and into the soil. Organically farmed cotton comes from controlled and certified crops, supporting

biodiversity and healthier ecosystems. This way, water consumption is significantly reduced, soil fertility is preserved and better working conditions and health are guaranteed to farmers and their families.

The LCA study<sup>2</sup> we conducted also confirmed that choosing organic cotton for our products led to a reduction of CO<sub>2</sub> emission from 18% to 21% compared to the conventional one.

Organic cotton was one of the first preferred materials introduced in 2018 and we keep investing in this fabric selecting certified supply chains that include both environmental and ethical standards and allow us to verify the fiber origin.

<sup>1</sup> The World Counts (2021) World Cotton Production Statistics.

<sup>2</sup> The LCA was conducted on selected articles, taking into account the complete life of the product, from its production to distribution.
